a Prediction matches the whole spectrum
$\kappa = 1.3 \times 10^4$ shared
$\kappa = 1.5$ independent
eigenvalue of $\bar{H}$
independent, exact
shared, exact
shared, first-order prediction
eigenvalue index
b $\kappa \propto s^{-2}$
exact
slope -2.00
$\kappa(\bar{H})$
displacement scale s
c amplification $\propto s^{-1}$
$\|\tilde{\tau}_H\| / \|\bar{D}\|$
exact
slope -1.01
rival s^{-2} form
displacement scale s
d 21 configurations, all within 0.10%
predicted / exact $\kappa(\bar{H})$
training checkpoints
12 shared cohorts
T and r sweep
